

ATS Series Automatic Transfer Panel

ATS series conversion switch cabinet at urgent, back up, can choose back up the power applied situation, provide the supervision, generator set of city electricity and city electricity or city electricity and generator set the power to start to convert with load. The sum of ATS series conversion switch's settling electric current is continuous, can be applied to its Ming card sum settle parameter the following of all situations.

Product Code : 6080004

COMPLETE DESCRIPTION

ATS series conversion switch cabinet at urgent, back up, can choose back up the power applied situation, provide the supervision, generator set of city electricity and city electricity or city electricity and generator set the power to start to convert with load. The sum of ATS series

conversion switch's settling electric current is continuous, can be applied to its Ming card sum settle parameter the following of all situations.

Convert switch controller the work is dependable and be easy to comprehension and have LCD the data and appearance show to control a button with operator. Controller all datas and various postpone at a time when and all can regulate but have never needed to use service tool on the scene.

ATS converts the conversion that the switch cabinet is used for two electricities in the road City.

ATS monitored the power supply quality of two electricities in the road City while converting a switch cabinet actually(the controller can establish for three kinds of work modes respectively at this time:All the way the lord is used, two road lords is used, ownerless use), all the way or two road lords is used namely from hurl from reply), be a lord to use circuit power failure or power supply quality not ability full.

When foot load requested, control system to automatically convert the load to back up the power power supply. When lord use circuit instauration normal, control system to automatically convert the load to the lord to use circuit power supply.

Ownerless use(namely from hurl not from reply), be all the way city electricity when the power failure or power supply quality can not satisfy a load request control system to automatically convert the load to two road City to give or get an electric shock power supply, only have be two road City electricity when the power failure or power supply quality can not satisfy load to request control system would convert the load to all the way city to give or get an electric shock power supply.

ATS converts the conversion that the switch cabinet is used for a city electricity and generator set.

ATS converts a switch cabinet solid monitor city electricity power supply quality, be city electricity when the power failure or power supply quality can not satisfy a load request control system to automatically send out to start generator set signal, and convert the load to the generator set power supply. When the city gives or gets an electric shock instauration normal, control system to automatically convert the load to the city to give or get an electric shock power supply, erupt a signal stop generator set the movement get into to need machine appearance.

Machine and the electricity dual allied lock allocation, keep two road the power(the city gives or gets an electric shock 1 give or get an electric shock with city 2 or city electricity and generator set) from throwing in in the meantime load and control circuit short circuit.
